

## Custom Built Central Vacuum Systems

Our systems incorporate a low-pressure drop across the unit resulting in less energy consumption. This feature reduces maintenance requirements and lowers operating costs by using about 30% less energy than traditional units for a cost-effective operation.

Unit shape and size can be customized to your specific space and process requirements. Depending on your application and available space, we are able to build and install a system to meet your specific application requirements.

### Standard Features:

- Custom designed for your specific requirements
- Piping and ducting systems that do not plug
- Dynamic type vacuum producers, so operators feel like they have the system to themselves
- Automated controls package
- High efficiency filtration systems
- Choice of discharge devices
- Energy conserving
- Low maintenance
- Vacuum levels up to 18" Hg
- Flexible configuration
- Custom designed to handle single to multiple operators

### Options:

- Pulse jet cleaning
- Complete system design and turn-key installation
- Explosion Protection
