

## Custom Built Central Vacuum Systems

Our systems incorporate low-pressure drop across the unit resulting in less energy consumption. This feature reduces maintenance requirements and lowers operating costs using about 30% less energy than traditional units for cost-effective operation.

Unit configuration can be customized to your specific space and process requirements. Depending on your application and available space, we are able to build and install a turn-key system to meet your requirements.

### Standard Features:

- Custom designed for your application
- Piping and ducting systems that do not plug
- Dynamic type vacuum producers, so operators feel like they have the entire system to themselves
- Automated controls package
- High efficiency filtration systems
- Choice of discharge storage hopper
- Energy conserving
- Low maintenance
- Vacuum levels up to 18" Hg
- Flexible configuration
- Custom designed to support single to multiple operators

### Options:

- Pulse jet cleaning
- Complete system design and turn-key installation
- Explosion Protection

Call our specialist today to discuss your central vacuum needs!
